GO Biological Process Enrichment − Lung−up Genes
blood circulation
regulation of system process
angiogenesis
chemotaxis
taxis
axon development
heart development
regulation of cell−cell adhesion
leukocyte migration
leukocyte cell−cell adhesion
regulation of membrane potential
positive regulation of cell activation
regulation of leukocyte cell−cell adhesion
extracellular matrix organization
extracellular structure organization
external encapsulating structure organization
regulation of blood circulation
cilium movement
antigen receptor−mediated signaling pathway
axoneme assembly
